Package 'dcmle'

October 13, 2022

Type Package

Title Hierarchical Models Made Easy with Data Cloning

Version 0.3-1

Date 2016-03-11

Author Peter Solymos

Maintainer Peter Solymos <solymos@ualberta.ca>

Description S4 classes around infrastructure provided by the
'coda' and 'dclone' packages to make package development easy as a breeze
with data cloning for hierarchical models.

License GPL-2

Depends R (>= 2.15.0), dclone (>= 2.0-0)

Imports coda, methods, stats4, lattice

Suggests MASS, parallel, rjags

SystemRequirements JAGS (>= 3.0.0)

`dcmle-package` *Hierarchical Models Made Easy with Data Cloning*

Description

S4 classes around infrastructure provided by the dclone package to make package development with data cloning for hierarchical models easy as a breeze.

Details

The package defines S4 object classes for plain BUGS models ("`gsFit`", after BU*GS*/JA*GS*), and BUGS models made ready for data cloning ("`dcFit`"). It also defines virtual classes for S3 object classes defined in the **dclone** and **coda** packages.

The S4 class "`dcmle`" is a fitted model object containing MCMC results as returned by the `dcmle` function. These object classes are easily extensible to allow inclusion into functions fitting specific models to the data (see Examples).

Creator functions makeGsFit and makeDcFit

Examples

```
## Data and model taken from Ponciano et al. 2009
## Ecology 90, 356-362.

## Function to create template object for the Beverton-Holt model
## R CMD check will not choke on character representation of model
## the convenient makeDcFit creator function is used here
bevholtFit <-
function(y) {
makeDcFit(
  data = list(ncl=1, n=length(y), Y=dcdim(data.matrix(y))),
  model = structure(
    c("model {",
      "  for (k in 1:ncl) {",
      "    for(i in 2:(n+1)) {",
      "      Y[(i-1), k] ~ dpois(exp(X[i, k]))",
      "      X[i, k] ~ dnorm(mu[i, k], 1 / sigma^2)",
      "      mu[i,k] <- X[(i-1),k]+log(lambda)-log(1+beta*exp(X[(i-1),k]))",
      "    }",
      "    X[1, k] ~ dnorm(mu0, 1 / sigma^2)",
      "  }",
      "  beta ~ dlnorm(-1, 1)",
      "  sigma ~ dlnorm(0, 1)",
      "  tmp ~ dlnorm(0, 1)",
      "  lambda <- tmp + 1",
      "  mu0 <- log(2)  + log(lambda) - log(1 + beta * 2)",
      "}"),
     class = "custommodel"),
  multiply = "ncl",
  unchanged = "n",
  params <- c("lambda","beta","sigma"))
}
## S4 class 'bevholtMle' extends the 'dcmle' class
## it can have additional slots
setClass("bevholtMle",
    representation(y="numeric", title="character"),
    contains = "dcmle")
## Function to fit the Beverton-Holt model to data
```

```
bevholt <- function(y, n.clones, ...) {
    new("bevholtMle",
        dcmle(bevholtFit(y), n.clones=n.clones, ...),
        y = y,
        title = "Beverton-Holt Model")
}
## Show method with appropriate heading
setMethod("show", "bevholtMle", function(object)
    show(summary(as(object, "dcmle"), object@title)))
paurelia <- c(17,29,39,63,185,258,267,392,510,
    570,650,560,575,650,550,480,520,500)
## Not run:
(m <- bevholt(paurelia, n.clones=2, n.iter=1000))
vcov(m)
m@y

## End(Not run)
```

chanames *coda package related generic functions*

Description

coda package related generic functions.

Usage

```
chanames(x, ...)
varnames(x, ...)
```

Arguments

x	MCMC object.
...	Other arguments.

Value

See corresponding help pages.

chanames varnames

codaMCMC-class *Class* "codaMCMC"

Description

An S4 representation of an mcmc.lits object of the **coda** package.

Objects from the Class

Objects can be created by calls of the form `new("codaMCMC", ...)`.

Slots

`values`: Object of class `"numeric"`, values from the posterior sample of length `niter * nvar * nchains`.

`varnames`: Object of class `"character"`, variable names.

`start`: Object of class `"integer"`, start of iterations.

`end`: Object of class `"integer"`, end of iterations.

`thin`: Object of class `"integer"`, thinning value.

`nchains`: Object of class `"integer"`, number of chains.

`niter`: Object of class `"integer"`, number of iterations.

`nvar`: Object of class `"integer"`, number of variables

crosscorr.plot

custommodel-class *Class* "custommodel"

Description

Stands for the 'custommodel' S3 class from **dclone** package.

Objects from the Class

A virtual Class: No objects may be created from it.

Extends

Class "dcModel", directly.

Methods

No methods defined with class "custommodel" in the signature.

Author(s)

Peter Solymos

See Also

custommodel

Examples

```
showClass("custommodel")
```

dcArgs-class *Class* "dcArgs"

Description

A class union for NULL and "character".

Objects from the Class

A virtual Class: No objects may be created from it.

Methods

No methods defined with class "dcArgs" in the signature.

Author(s)

Peter Solymos

Examples

```
showClass("dcArgs")
```

---

dcCodaMCMC-class *Class* "dcCodaMCMC"

Description

An S4 representation of an mcmc.lits object of the **coda** package, with data cloning attributes from **dclone** package (the mcmc.list.dc class).

Objects from the Class

Objects can be created by calls of the form `new("dcCodaMCMC", ...)`.

Slots

`dctable`: Object of class "dcTable", data cloning based iterative posterior statistics based on `dctable`.

`dcdiag`: Object of class "dcDiag", data cloning convergence diagnostics based on `dcdiag`.

`nclones`: Object of class "nClones", number of clones.

`values`: Object of class "numeric", same as in "codaMCMC" class.

`varnames`: Object of class "character", same as in "codaMCMC" class.

`start`: Object of class "integer", same as in "codaMCMC" class.

`end`: Object of class "integer", same as in "codaMCMC" class.

`thin`: Object of class "integer", same as in "codaMCMC" class.

`nchains`: Object of class "integer", same as in "codaMCMC" class.

`niter`: Object of class "integer", same as in "codaMCMC" class.

`nvar`: Object of class "integer", same as in "codaMCMC" class.

Extends

Class "codaMCMC", directly.

Methods

[`signature(x = "dcCodaMCMC")`: ...

[[`signature(x = "dcCodaMCMC")`: ...

```

---

dcDiag-class *Class* "dcDiag"

Description

Virtual class for data cloning convergence diagnostics.

Objects from the Class

A virtual Class: No objects may be created from it.

Methods

No methods defined with class "dcDiag" in the signature.

Author(s)

Peter Solymos

See Also

dcdiag

Examples

```
showClass("dcDiag")
```

---

dcdiag-class *Class* "dcdiag"

Description

Stands for the 'dcdiag' S3 class from **dclone** package.

Objects from the Class

A virtual Class: No objects may be created from it.

Extends

Class "dcDiag", directly.

Methods

No methods defined with class "dcdiag" in the signature.

See Also

dcdiag

Examples

```
showClass("dcdiag")
```

dcFit-class *Class* "dcFit"

Description

Compendium for data cloning

Objects from the Class

Objects can be created by calls of the form `new("dcFit", ...)`.

Slots

`multiply`: Object of class "dcArgs", same as corresponding `dc.fit` argument.

`unchanged`: Object of class "dcArgs", same as corresponding `dc.fit` argument.

`update`: Object of class "dcArgs", same as corresponding `dc.fit` argument.

`updatefun`: Object of class "dcFunction", same as corresponding `dc.fit` argument.

`initsfun`: Object of class "dcFunction", same as corresponding `dc.fit` argument.

`flavour`: Object of class "character", same as corresponding `dc.fit` argument, default is "jags". It can also be "winbugs", "openbugs", or "brugs" referring to the `argument` of `bugs.fit`, in which case `flavour` will be treated as "bugs".

`data`: Object of class "list", same as corresponding `dc.fit` argument.

`model`: Object of class "dcModel", same as corresponding `dc.fit` argument.

`params`: Object of class "dcParams", same as corresponding `dc.fit` argument.

`inits`: Object of class "dcInits", same as corresponding `dc.fit` argument.

Extends

Class "`gsFit`", directly.

Methods

show `signature(object = "dcFit")`: ...

Author(s)

`dc.fit`, `makeDcFit`

Examples

```
showClass("dcFit")
```

dcFunction-class *Class* "dcFunction"

Description

Virtual class for BUGS/JAGS models defined as functions.

Objects from the Class

A virtual Class: No objects may be created from it.

Methods

No methods defined with class "dcFunction" in the signature.

Author(s)

Peter Solymos

Examples

```
showClass("dcFunction")
```

dcInits-class *Class* "dcInits"

Description

Virtual class for initial values.

Objects from the Class

A virtual Class: No objects may be created from it.

Methods

No methods defined with class "dcInits" in the signature.

Author(s)

Peter Solymos

Examples

```
showClass("dcInits")
```

dcmle *Asymptotic maximum likelihood estimation with data cloning*

Description

This function is a wrapper to fit the model to the data and obtain MLE point estimates and asymptotic standard errors based on the estimate of the Fisher information matrix (theory given by Lele et al. 2007, 2010, software implementation is given in Solymos 2010).

Usage

```
dcmle(x, params, n.clones = 1, cl = NULL, nobs, ...)
```

Arguments

x	an object of class "gsFit" or "dcFit".
params	character, vector of model parameters to monitor.
n.clones	integer, vector for the number of clones used in fitting.
cl	cluster object (snow type cluster) or number of cores (multicore type forking), optional.
nobs	number of observations, optional.
...	other arguments passed to underlying functions (see Details).

Details

The function uses slots of the input object and passes them as arguments to underlying functions (jags.fit, jags.parfit, bugs.fit, dc.fit, dc.parfit).

Value

An object of class "dcmle".

gsFit-class *Class* "gsFit"

Description

BUGS/JAGS compendium

Objects from the Class

Objects can be created by calls of the form new("gsFit", ...).

Slots

data: Object of class "list", same as corresponding jags.fit bugs.fit or argument.

model: Object of class "dcModel", same as corresponding jags.fit bugs.fit or argument.

params: Object of class "dcParams", same as corresponding jags.fit bugs.fit or argument.

inits: Object of class "dcInits", same as corresponding jags.fit bugs.fit or argument.

flavour: Object of class "character", same as corresponding dc.fit argument, default is "jags". It can also be "winbugs", "openbugs", or "brugs" referring to the argument of bugs.fit, in which case flavour will be treated as "bugs".

Methods

show `signature(object = "gsFit")`: ...

Author(s)

Peter Solymos

See Also

`jags.fit`, `bugs.fit`, `makeGsFit`

Examples

```
showClass("gsFit")
```

`makeDcFit` *Data object creators*

Description

Creator functions for data types used in the **dcmle** package.

Usage

```
makeGsFit(data, model, params = NULL, inits = NULL, flavour)

makeDcFit(data, model, params=NULL, inits = NULL,
    multiply = NULL, unchanged = NULL, update = NULL,
    updatefun = NULL, initsfun = NULL, flavour)
```

Arguments

`data`	usually a named list with data.
`model`	BUGS model (function, character vector or a `custommodel` object). The argument is coerced into a `custommodel` object.
`params`	optional, character vector for model parameters to monitor.
`inits`	initial values (`NULL`, list or function).
`multiply`	optional, argument passed to `dc.fit`.
`unchanged`	optional, argument passed to `dc.fit`.
`update`	optional, argument passed to `dc.fit`.
`updatefun`	optional, argument passed to `dc.fit`.
`initsfun`	optional, argument passed to `dc.fit`.
`flavour`	optional, argument passed to `dc.fit`.

Details

'gsFit' (after BU*GS*/JA*GS*) is a basic object class representing requirements for the Bayesian MCMC model fitting. The 'dcFit' object class extends 'gsFit' by additional slots that are used to fine tune how data cloning is done during fitting process. Both 'gsFit' and 'dcFit' represent prerequisites for model fitting, but do not containing any fitted parts. Creator functions `makeGsFit` and `makeDcFit` are available for these classes. See `dcmle-package` help page for usage of creator functions.

The default `flavour` is stored in `getOption("dcmle.flavour")` with value `"jags"`. It can be changed as `options("dcmle.flavour"="bugs")` if required.

Value

`makeGsFit` returns a 'gsFit' object (gsFit-class).

`makeDcFit` returns a 'dcFit' object (dcFit-class).

Author(s)

Examples

```
showClass("gsFit")
new("gsFit")
showClass("dcFit")
new("dcFit")
```

---

mcmc-class *Class* "mcmc"

Description

Stands for the 'mcmc' S3 class from **coda** package.

Objects from the Class

A virtual Class: No objects may be created from it.

Extends

Class `"MCMClist"`, directly.

Methods

No methods defined with class "mcmc" in the signature.

Author(s)

Peter Solymos

See Also

mcmc

Examples

```
showClass("mcmc")
```

---

mcmc.list-class *Class* "mcmc.list"

Description

Stands for the 'mcmc.list' S3 class from **coda** package.

Objects from the Class

A virtual Class: No objects may be created from it.

Extends

Class "MCMClist", directly.

Methods

No methods defined with class "mcmc.list" in the signature.

Author(s)

Peter Solymos

See Also

mcmc.list

Examples

```
showClass("mcmc.list")
```

mcmc.list.dc-class *Class* "mcmc.list.dc"

Description

Stands for the 'mcmc.list.dc' S3 class from **dclone** package.

Objects from the Class

A virtual Class: No objects may be created from it.

Extends

Class "MCMClist", directly.

Methods

No methods defined with class "mcmc.list.dc" in the signature.

```

---

nClones-class *Class* "nClones"

Description

Number of clones, virtual class.

Objects from the Class

A virtual Class: No objects may be created from it.

Methods

No methods defined with class "nClones" in the signature.

Author(s)

Peter Solymos

Examples

```
showClass("nClones")
```

---

summary.codaMCMC-class
Class "summary.codaMCMC"

Description

Summary object.

Objects from the Class

Objects can be created by calls of the form `new("summary.codaMCMC", ...)`.

Slots

settings: Object of class "integer", MCMC settings.

coef: Object of class "matrix", posterior statistics.

Methods

show `signature(object = "summary.codaMCMC")`: ...

Author(s)

Peter Solymos

See Also

`mcmc.list`.

Examples

```
showClass("summary.codaMCMC")
```

---

summary.dcCodaMCMC-class

Class `"summary.dcCodaMCMC"`

Description

Summary object.

Objects from the Class

Objects can be created by calls of the form `new("summary.dcCodaMCMC", ...)`.

Slots

`settings`**:** Object of class `"integer"`, MCMC settings.

`coef`**:** Object of class `"matrix"`, coefficients (posterior means).

`convergence`**:** Object of class `"dcDiag"`, data cloning convergence diagnostics.

Extends

Class `"summary.codaMCMC"`, directly.

Methods

show `signature(object = "summary.dcCodaMCMC")`: ...

Author(s)

Peter Solymos

See Also

`jags.fit`, `dcdiag`

Examples

```
showClass("summary.dcCodaMCMC")
```

---

summary.dcmle-class *Class* "summary.dcmle"

Description

Summary object.

Objects from the Class

Objects can be created by calls of the form `new("summary.dcmle", ...)`.

Slots

title: Object of class "character", title to print, optional.

call: Object of class "language", the call.

settings: Object of class "integer", MCMC settings.

coef: Object of class "matrix", coefficients (posterior means).

convergence: Object of class "dcDiag", data cloning convergence diagnostics.

Extends

Class "summary.dcCodaMCMC", directly. Class "summary.codaMCMC", by class "summary.dcCodaMCMC", distance 2.

Methods

show `signature(object = "summary.dcmle")`: ...

Author(s)

Peter Solymos
